For many years, physiologists interested in the overall functioning of the lung have felt a need for better quantitative descriptions of pulmonary anatomy. As physiologists, we know a good deal about the forces operating to produce pulmonary ventilation, and the quantities that define this function in rest and exercise ; and the same for effective distribution of air within the lung - 'alveolar' ventilation-, and for the exchange of respiratory gases between air and blood. There have been no correspondingly precise quantitative measurements of the pulmonary structures that serve these functions. The great advances in the study of pulmonary anatomy in the past decade have been chiefly in the realm of 'fine structure'. This has tended to bring together anatomy and biochemistry or physical chemistry, rather than anatomy and physiology. This conjunction has aided, for example, the conception of diffusion as a physicochemical process, but not that of...
