Date :2010-07-01 version 1. This book is the Ministry of Higher Education Teaching Materials Steering Committee of engineering materials and forming processes like professional planning materials. This book contains a total of six teaching modules. one for the mechanical properties of metal detection technology focuses on stretching, bending, torsion, impact, hardness testing, and related mechanical properties testing and application; module two macroscopic metal detection technology, describes the types of metals and macro defect detection methods; module three detection techniques for the metallographic analysis, metallographic analysis focuses on the basics of detection and typical metals, heat treatment and welding parts spare parts metallographic analysis and detection methods; module four non-destructive testing of metal technology, introduces the basics of metal and non-destructive testing methods, principles, characteristics and applications; Module 5 for the chemical composition of metallic materials testing technology, introduces the steel spark identification, spectral analysis and chemical analysis of the principles, characteristics and applications; Module 6 for the heat treatment quality testing and analysis, introduces a variety of heat-treated parts of the quality requirements, relevant standards and test methods of analysis. This book can be used as engineering materials and forming processes vocational, metal materials and heat treatment technology, materials engineering, casting, welding, forging and other professional materials quality inspection technology course materials used, but also as a undergraduate, vocational and other colleges teachers and students of reference materials, and corporate training materials for use in non-academic education, but also for quality control in materials technology, engineering and technical personnel and operators reference to read, as the relevant technical staff tool. Contents: Module mechanical properties of a metal detection technology 1.1 tensile...
